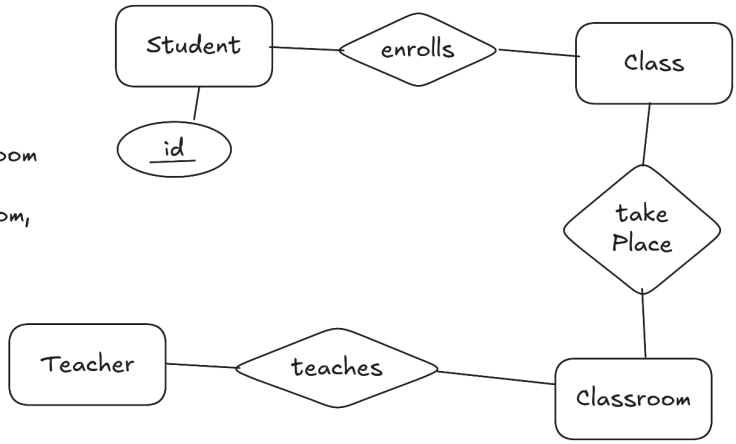
Database Project

- Need to create scenario (from your approved idea)
- convert scenario into features
- from features create ER/EER Diagram
- from ER/EER Diagram create Schema Diagram
- from Schema Create Database via phpmyadmin GUI
- start building the website

CRUD Operation
-Create
-Read
-Update
-Delete

Things to keep in mind
- each group member must implement 3 features
- each feature is a function/method
  that interacts with the database using sql queries
- login page must be made but it will not be counted as feature

Scenario
- School Management System
Entity: Student, Teacher, Classes, Classroom
Relationship:
Teacher teaches class, class is in classroom,
Class contains students


Features
Students can enroll in class
classes are tracked to classrooms
Teacher teaches class
